

Waste Sorting - a Mini Guide

Do you think it's difficult to know how to sort your waste? Follow the steps below to get it right.

This is what you do: Think about what you want to throw out. Start from the beginning. Then ask yourself the questions given in the grey circles and follow the lines on the basis of your answer. Do this until you find the answer to your question.

More detailed information can be found on the inside of the booklet. For example, what counts as packaging, what is dangerous waste etc.

Skellefteå Municipality is responsible for:

Food waste

The brown container is for **paperbags** in which to put food waste.

Food waste: meat, fish, fruit, vegetables, eggs, dairy products, rice, pasta, meat and fish bones, fish waste and shellfish shells, egg shells, fruit and vegetable peelings, bread, biscuits, cakes and buns, sweets, coffee and tea grounds with filters and bags, wilted flowers and pot plants (not soil)

Your sorted food waste is turned into biogas. This serves as fuel for many municipal vehicles, local buses downtown, several taxis and a number of cars for private use.

Combustible waste

The green bin is for sorted combustible household waste, enclosed for example in plastic bags.

Paper: used tissues and napkins, envelopes, wash-cloths, baking paper

Hygiene: nappies, sanitary products, cotton buds, cotton wool

Textiles: clothing, cloths, shoes

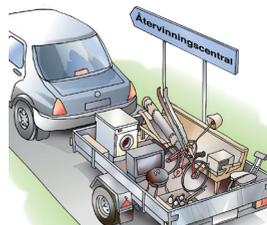

Small items of use: small wooden and plastic toys, toothbrushes, disposable razors, compact discs, snuff boxes, chopping boards

Other: candles, bandages, plasters, plastic combs, cigarette boxes, vacuum cleaner bags, sausage skin, gift wrap ribbon

Combustible waste is incinerated, and the energy it provides is utilised in the form of electricity or distance heating

Bulky waste

Transport your bulky waste to a manned recycling centre. Bulky household waste is collected once a year. At other times it may be collected upon order for a fixed fee.

Examples: Fridges and freezers (household models), metal waste, bicycles, outdoor grills, snow shovels, push mowers,

Kitchen china, drinking glasses, items of furniture and kitchen utensils made of mixed materials, rugs, clothing, combustible items of furniture etc.

TV sets, radios, small home appliances, stoves, washing machines, dishwashers, kitchen fans, computers, screens, light bulbs etc.

Bulky waste is utilised and recycled in different ways depending on the kind of material it is made of.

The paper and packaging industry is responsible for:

Newspapers and paper

Newspapers, flyers, brochures, writing paper, catalogues etcetera.

There is a collection point near the recycling station, among other places

Paper-packaging

Corrugated cardboard, milk, egg and pizza cartons, washing detergent boxes etc.

Bags for flour, sweet wrappers, gift wrap, paper mugs, paper plates, toilet rolls

Plastic packaging

Plastic containers, plastic bottles, plastic jars, plastic bags.

Crisp wrappers, plastic wrap, toothpaste tubes, mince trays, styrofoam packaging etc

Metal packaging

Tin cans, tubes, capsules, lids, aluminium containers and foil etcetera.

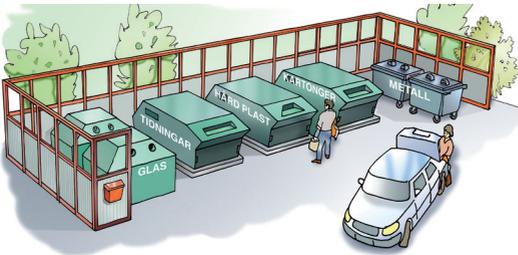

Glass packaging

Glass packaging, bottles and jars made of coloured and colourless glass.

You sort and dispose of these in different containers depending on whether they are coloured or colourless glass

Does the packaging consist of more than one material?

If the packaging consists of more than one material, you should if possible separate these. A glass jar with a metal lid is easy to pull apart, whereas a spray pump is usually hard to detach. In that case, leave it attached. If you have packaging consisting of several kinds of material which cannot be separated, these are to be sorted according to the main material in terms of weight.

Full containers?

You need to contact FTIAB if you have questions regarding the recycling stations or wish to report that a container needs emptying etc. You can ring their customer service number on 0200 88 03 11 or leave a message on their website.

Newspapers and recycled paper is recycled to new paper products

Paper packaging is recycled to become new packaging or building material

Plastic packaging is recycled into items such as noise barriers, flower pots, plastic bags etc

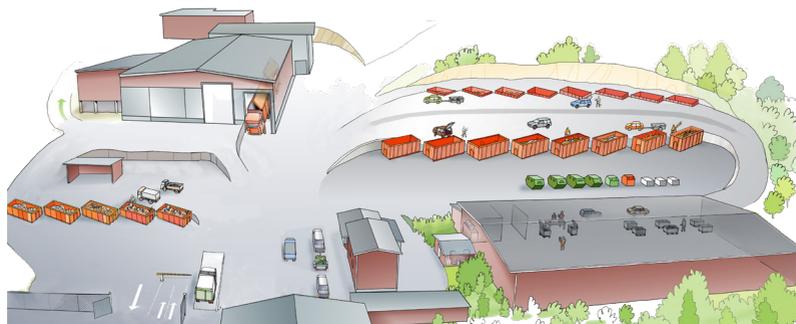

Metal packaging is recycled into items such as steel bars and building components.

Glass packaging is recycled into new bottles and jars as well as items such as fibreglass.

Sorting of hazardous waste and other kinds of waste

It is forbidden to throw hazardous waste in the bins. They can cause great damage to the environment and must be left at a recycling center.

- **Fluorescent tubes, light bulbs, low-energy bulbs** should be sorted and taken to the recycling centre. It is essential that any paper and transport wrappers is removed.
- **Other hazardous household waste** such as waste oil, solvents, paints, adhesives, hardeners, hydraulic hoses etc should be taken to the recycling centre.
- **Batteries, small sized**, should be put in battery recycling boxes in the vicinity or taken to the recycling centre.
- **Batteries, larger than 3 kg in size**, car batteries and similar items should be taken to the recycling centre, a petrol station or a company which recycles batteries. Remove plastic bags and other wrapping.
- **Medical waste**, including needles and other cutting products should be submitted to pharmacy (drugstore).
- **Flammable waste** must be properly extinguished and enclosed into separate containers or bags and brought to the recycling center..
- **Other waste** such as landfill waste, gardening waste, wood waste, scrap metal and combustible bulky waste should be taken to the recycling centre.
- **Other dangerous industrial waste** such as waste oil, solvents, oil filters, paints, adhesives, hydraulic hoses etc should primarily be taken to companies that take care of hazardous industrial waste.
